

The City of Malvern is turning the existing 2-way stop into a 4-way stop at the following intersection, effective June 1st : Pine Bluff St. & Wilson St.

We have seen an increased number of injury accidents at this intersection, and it is our concern that if this is left unaddressed, it will continue. We also believe that this is another layer of safety for our drivers. Safety is the main reason for the use of stop signs at busy intersections.

Another benefit of 4-way stops is the assurance that vehicles are entering the intersection at a lower speed and have more time to take notice of the traffic situation.

The rules at a 4-stop intersection are the first car to pull up to the stop sign is the first car that gets to proceed. If two or more cars pull up to a four-way stop at the same, the car that is farthest to the right should go first.
